

Bioventus TheraSkin Coverage Expands to Provide for 17 Million More Covered Lives

April 8, 2022

DURHAM, N.C., April 08, 2022 (GLOBE NEWSWIRE) -- [Bioventus Inc.](#) (Nasdaq: BVS) ("Bioventus" or the "Company"), a global leader in innovations for active healing, announced today that TheraSkin coverage now includes three out of the four largest commercial plans in the U.S. along with Medicare and several regional commercial plans. Bioventus' TheraSkin is a cellular and tissue-based treatment for difficult to heal chronic wounds and this expanded coverage adds more than 17 million medical lives to the existing coverage.

The results of Bioventus' TheraSkin Randomized Controlled Trial (RCT) were published on January 26, 2022 in the International Wound Journal and demonstrated statistically significant improved wound healing when receiving the treatment versus standard of care. This recent publication further supplements the 13 previous published articles supporting wound treatment with TheraSkin.

"We are pleased that another large commercial plan now recognizes the value of TheraSkin. The Bioventus team has been diligently working toward strengthening our clinical program, and this additional coverage represents a major accomplishment as over 200 million patients across the U.S. now have access to TheraSkin," said Tim Donovan, Vice President of Market Access & Health Economics for Bioventus.

TheraSkin is authorized for use by the FDA as a 361 HCT/P (human cells, tissues, and cellular and tissue-based product) and is indicated for use in applications for the repair of human skin, including but not limited to, use for treatment of diabetic foot ulcers, venous leg ulcers, pressure ulcers, dehisced surgical wounds, necrotizing fasciitis, traumatic burns and radiation burns. TheraSkin can be used over exposed bone, tendon, joint capsule and muscle. The recommended reapplication protocol is every two (2) weeks during the treatment period of the patient's wound. The responsible physician may determine that more or less frequent TheraSkin applications are reasonably and medically necessary for the treatment of the patient.
